

Use your phone as GPS while in Crete for FREE.

The whole island of Crete is mapped by Google maps, down to the smallest roads, so you can use the GPS on your phone to guide you anywhere! As you don't want to be constantly connected to the internet, we suggest the following:

- install the google maps app (Android or iOS)
- when you have a good internet connection, open the app, and download the map of Crete **offline** - look in the menu, you'll find it. The whole island will hold in 2 offline maps (east/west)
- when in Crete, you need an internet connection just to set your itinerary. Do it in the Studio, in a cafe with wifi, or connect briefly to the cellular network if you have an international plan.
- That's it! You can now go to airplane mode, and use your phone as a GPS for your whole trip, without connecting once. Only major changes in the itinerary will necessitate a new connection.
